

SRS - Selenium-Tested Performance Review Portal

Roll No: 23102B0009 | Student: Jawad Shaikh

1. Problem Statement

Organizations often conduct employee performance reviews manually using spreadsheets or paper forms. This portal digitizes the process through employee self-reviews, manager evaluation, HR reporting, and Selenium-based quality assurance.

2. Objectives

- Digitize reviews
- Manager approval workflow
- Automatic score calculation
- Centralized HR records
- Reliable testing with Selenium

3. Scope

In Scope: Login, Self Review, Manager Approval, Status Tracking, Performance Score.
Out of Scope: Payroll, Attendance, Recruitment, Email Notifications.

4. Stakeholders

Employee, Manager, HR, Admin

5. Functional Requirements

1. Login 2. Submit Review 3. Edit Review 4. Approve/Reject 5. Comments 6. Score Calculation 7. Status Tracking

6. Non-Functional Requirements

Security, MySQL storage, Response under 2s, Cross-browser compatibility, Selenium automation

7. API Endpoints

POST /login
GET /employees
POST /reviews
GET /reviews/{id}
PUT /reviews/approve

8. Technology Stack

Frontend: HTML/CSS/Bootstrap
Backend: Spring Boot
Database: MySQL
Testing: Selenium + JUnit
DevOps: GitHub, Jenkins, Docker, Ansible

9. User Stories

User Story ID	Description
US-01	Employee submits self-review
US-02	Manager approves/rejects
US-03	HR views reports
US-04	Employee checks status

10. Architecture Summary

The Browser UI communicates with a Spring Boot backend through REST APIs. Spring Boot performs business logic and stores data in MySQL. Selenium automates end-to-end testing of the complete workflow.
